

How to Add Listing Ninja to Gumroad

Basic Tier & Pro Tier Setup Guide

Purpose

Use this guide to create two clean Gumroad product pages, enable license keys, capture each product permalink, and connect those permalinks to the Listing Ninja marketing site and Vercel environment variables.

Basic Tier	One-time purchase for everyday sellers using Facebook Marketplace.
Pro Tier	Higher-priced one-time purchase with all marketplaces, advanced AI tools, pricing analysis, templates, and priority support.
Needed later	Each Gumroad product permalink is used as the matching GUMROAD_PRODUCT_PERMALINK value in Vercel.

1. Why Gumroad is a strong fit for Listing Ninja

Gumroad is a fast way to sell a digital tool before building a full custom billing system. It gives Listing Ninja hosted product pages, checkout, customer receipts, digital delivery, and software license key generation in one place.

For a two-tier launch, Gumroad is useful because Basic and Pro can each live as separate products with separate pricing, separate license keys, separate permalinks, and separate marketing copy.

Recommended launch structure

Create two separate Gumroad products: “Listing Ninja Basic” and “Listing Ninja Pro.” This keeps license verification simple because each product has its own permalink and product identity.

2. Create the Basic Tier product

Basic should feel practical, approachable, and built for regular marketplace sellers who want better listings without a complicated workflow.

Basic Tier positioning

- Audience: regular marketplace sellers, side hustlers, estate sale shoppers, and resellers.
- Marketplace support: Facebook Marketplace only.
- Format: one-time purchase, not subscription.
- Promise: turn photos and item details into optimized marketplace listings faster.

St ep	What to do in Gumroad	Listing Ninja recommendation
1	Open Gumroad, go to Products, and choose to create a new product.	Use a digital product/software-style setup. Keep the product separate from Pro so the app can verify Basic purchases independently.
2	Enter the product name.	Listing Ninja Basic or Listing Ninja - Basic Tier .
3	Write a concise product description.	Lead with the outcome: “Create polished Facebook Marketplace listings from photos and item details in minutes.” Then list the included features.
4	Set pricing.	Use a one-time lower entry price. Suggested range: \$19-\$39 one-time. Pick the price that matches your launch offer and support expectations.
5	Add a cover image and thumbnail.	Use the Listing Ninja logo, a clean AI listing workflow screenshot, and a short benefit line like “AI listings for Facebook Marketplace.”
6	Confirm the purchase type.	Set the product as a one-time purchase. Do not use a recurring membership unless the app is also built for subscription checks.
7	Add product content or access instructions.	Include a download, setup note, or “Access Listing Ninja here” link. Tell buyers their license key appears in their receipt.
8	Enable license keys.	Turn on license key generation so each Basic buyer receives a unique key tied to the Basic product.

Step	What to do in Gumroad	Listing Ninja recommendation
9	Publish or save as draft.	Preview the checkout and product page before sharing publicly.

Suggested Basic feature copy

Includes core AI listing generation, photo uploads, SEO optimization, keyword generation, local CSV export, saved listing history, standard customer support, and basic listing templates for Facebook Marketplace.

3. Create the Pro Tier product

Pro should make the upgrade feel obvious: more marketplaces, stronger AI controls, smarter pricing decisions, richer templates, and faster support.

Pro Tier positioning

- Audience: higher-volume sellers, resellers, power users, and sellers expanding beyond Facebook Marketplace.
- Marketplace support: Facebook Marketplace, eBay, eBay Vintage, Offerlist, Mercari, TikTok Shop, and Facebook Vintage.
- Format: one-time purchase at a higher price point.
- Promise: publish smarter listings across more marketplaces with advanced AI and pricing tools.

Step	What to do in Gumroad	Listing Ninja recommendation
1	Create a second new product in Gumroad.	Do not make Pro a duplicate price option inside Basic if license verification needs a distinct Pro permalink.
2	Enter the product name.	Listing Ninja Pro or Listing Ninja - Pro Tier .
3	Write the product description.	Start with "Everything in Basic, plus multi-marketplace support and advanced AI listing tools." Then call out Pro-only benefits.
4	Set pricing.	Use a visibly higher one-time price. Suggested range: \$59-\$99 one-time, depending on launch positioning.
5	Add a premium cover image.	Use the same brand system as Basic, but add "Pro" badge styling and marketplace icons or marketplace names.
6	Confirm one-time purchase.	Keep Pro as a one-time purchase unless you intentionally introduce recurring SaaS billing later.
7	Add access instructions.	Tell buyers to use their Pro license key inside Listing Ninja to unlock all marketplaces and Pro tools.
8	Enable license keys.	Turn on unique license key generation for the Pro product separately from Basic.
9	Publish or save as draft.	Preview the public page and confirm the Pro value difference is clear above the fold.

Suggested Pro feature copy

Includes everything in Basic plus all marketplaces, advanced AI prompting, competitor pricing analysis, enhanced AI prompting, advanced listing templates, and priority support.

4. Set up Gumroad license keys

License keys are the bridge between Gumroad purchases and Listing Ninja access. Gumroad can generate keys for software products, and the Listing Ninja app can verify a buyer by checking the submitted license key against the correct Gumroad product permalink.

Step	What to do in Gumroad	Listing Ninja recommendation
1	Open the Basic product editor.	Find the product settings area for license keys or software licensing.
2	Enable license key generation.	Use Gumroad-generated unique keys. Do not manually reuse one shared key.
3	Save the Basic product.	Make one test purchase or preview checkout when possible to confirm the key appears in the buyer receipt.
4	Repeat for the Pro product.	Pro must have its own generated keys so Pro access can be separated from Basic access.
5	Document internal mapping.	Keep a private note: Basic permalink maps to Basic access; Pro permalink maps to Pro access.

Important

A license key alone is not the tier. The app should verify the key against the matching Gumroad product permalink so a Basic key cannot unlock Pro features.

5. Get each product permalink

The product permalink is the Gumroad product URL used by Listing Ninja or the verification API to identify which product a license key belongs to. Save one permalink for Basic and one for Pro.

Step	What to do in Gumroad	Listing Ninja recommendation
1	Open the Basic product in Gumroad.	Go to the product page or sharing/custom URL area.
2	Copy the product permalink.	It usually looks like a Gumroad product URL ending in <code>/your-product-slug</code> .
3	Save it for deployment.	Use it for the Basic product environment variable or tier mapping.
4	Repeat for the Pro product.	Copy the Pro permalink separately.
5	Update Vercel environment variables.	Set the appropriate Gumroad permalink variable(s), then redeploy so the live app sees the new values.

Suggested private note format

Basic: Listing Ninja Basic - Gumroad permalink - GUMROAD_PRODUCT_PERMALINK_BASIC

Pro: Listing Ninja Pro - Gumroad permalink - GUMROAD_PRODUCT_PERMALINK_PRO

6. Launch tips for stronger conversion

Cover image recommendations

- Use a 16:9 or square image that still reads clearly in small thumbnails.
- Show the result: a clean listing card, photo upload flow, or before-and-after listing copy.
- Keep text short: “AI Marketplace Listings” for Basic and “Multi-Marketplace Pro Tools” for Pro.
- Use consistent brand colors, logo placement, and tier badges.

Product description best practices

- Open with the outcome, not a feature list.
- Add a “Who this is for” section so buyers self-identify quickly.
- Use bullet points for included features and supported marketplaces.
- Add a short “How it works” section: upload photos, generate listing, copy/export, post.
- State the one-time purchase clearly to reduce checkout hesitation.

Linking from the marketing site

- Add two primary buttons: “Buy Basic” and “Buy Pro.”
- Send each button directly to its matching Gumroad product page.
- Keep Basic and Pro comparison copy on the site consistent with Gumroad copy.
- After changing Gumroad URLs, update the site buttons and Vercel environment variables before redeploying.

7. Quick checklist

- Create Gumroad product: Listing Ninja Basic.
- Set Basic as a one-time purchase.
- Add Basic description, price, cover image, content/access instructions.
- Enable Gumroad license keys for Basic.
- Copy and save the Basic product permalink.
- Create Gumroad product: Listing Ninja Pro.
- Set Pro as a higher-priced one-time purchase.
- Highlight Pro-only marketplaces and advanced features.
- Enable Gumroad license keys for Pro.
- Copy and save the Pro product permalink.
- Add Basic and Pro buy buttons to the Listing Ninja marketing site.
- Update Vercel environment variables and redeploy.
- Run one test purchase or checkout preview for each tier before public launch.

Final handoff notes

- Keep the Basic and Pro permalinks in a private deployment note.
- After Gumroad URLs are live, test each marketing site button in an incognito browser window.
- Redeploy the Vercel app after setting or changing any Gumroad environment variables.
